NESS D8 USER MANUAL
Revision 4.7 June 2003

Document Part Number: 890-264
For products:
100-191 D8 LED Control Panel (V4.7)
100-688 D8 LCD Control Panel (V4.7)

CONTENTS

NESS D8 FEATURES

New feature Temporary Day Zones, see page 16

- 8 Fully programmable zones

- Any combination of hardwire or radio zones

- Full radio supervision

- Contact ID Dialler Format

- Ultra-Modern and Impact resistant Housing

- Ness Audible Dialler Format

- "Follow Me" Audible Dialler Option

- Separate 24 Hour Tamper input

- Single or Double Trigger Zones

- Remote LED or LCD Keypads (Max 3)

- Fully programmable via the system Keypad - Eliminates the need for expensive programmers or Proms.

- Inbuilt Vibration Sensor Analyser

- All programming data is permanently stored in a non-volatile EEprom memory

- Windows based Up\Down load Software allows remote programming and event status

- True Dynamic Battery Test every time the Panel is armed / disarmed and every hour

- Area Partitionable (2 Areas). Any Zone can be programmed to any area, as well as common areas

- Comes complete with an AC plug pack and supports a 12V 7Ah battery to maintain systems security under all power supply conditions

- Monitor Mode (Home Mode)

- Outputs are separately fused with Automatic Reset Fuses

- Day Mode and Door Chime feature.

- 30 Event Memory

- Supports 8 Radio Devices (Radio PIRs, Radio Reeds etc)

- Supports 14 Radio Keys

- All inputs and outputs are heavily protected against lightning and high voltage supply transients. An earth terminal is provided for extra protection

- 15 User Codes

- 'Arm only' codes can be programmed

- Programmable Inputs to activate selectable Outputs

- Manufactured using the latest SMD technology

- Simple to program and use.

The Ness D8 micro computer based 8 zone **control panel** is the heart of your security system to which all your detection devices connect.

Each **Zone** of the panel can be connected to one or more detection devices to protect separate rooms of your premises.

Detection devices may be connected to the D8 control system directly by cabling or with optional wireless (Radio) devices.

Detection devices called **Passive Infra-Red Detectors** (or **P.I.R**'s for short) can detect the movement of an intruder by sensing their body heat. **P.I.R's** are used to cover various critical areas of your premises where an intruder may enter or trespass. Another detection device used is called a **Reed Switch**. Reed Switches are attached to windows and doors to detect if a window or door has been opened. A Reed Switch consists of a magnet which is normally attached to the moving part of a window or door and the Reed switch which mounts to the door or window frame.

The panel is "**Armed**" when it is set to detect an intruder. At other times it is "**Disarmed**".

Normally a zone is considered **Sealed**. Activation of a detection device will cause the zone to be **Unsealed** and may cause an alarm.

Detectors such as fire detectors and panic buttons must be able to generate an alarm at all times regardless of the panel setting. A zone with this assignment is called a **24 hour zone**.

Some detection devices may be required to generate an alarm or warning only when the panel is Disarmed. A zone with this assignment is called a **Day zone.**

Before leaving the premises you must Arm the panel to enable it to detect intruders and generate an alarm. After arming, the panel will ignore detectors during the **Exit Delay Time** to enable you to depart without triggering an alarm.

Arming the system may be done through the keypad or with the use of optional Radio Keys for Arming by remote control from outside the premises.

When you enter the premises the panel will ignore selected zones for the **Entry Delay Time** and will not alarm unless you don't Disarm the panel during this allowed time.

Disarming the system may be done by keypad or with the use of optional Radio Keys.

Monitor mode allows you to Arm selected zones while others are ignored. Typically, perimeter zones (doors and windows) can be monitored while you are at home.

If you wish to split your alarm system into two areas with access limited to each area by code numbers then **Area operation** is used. Radio Keys can also Arm and Disarm Areas.

The control panel housing and the covers over external sirens are protected by **tamper switches** to detect someone attempting to disable the security system. Activation of these switches will cause an instant tamper alarm.

If a detector becomes faulty, you can **Exclude** the associated zone so that it is totally ignored and cannot generate an alarm. Including the zone will enable it to generate an alarm again.

The control panel is fitted with a **rechargeable stand-by battery** to ensure your security system continues to operate if the mains power is interrupted. This control panel automatically tests the battery every hour and whenever you Arm/Disarm the panel. **(Dynamic Battery test).**

Whenever an alarm occurs, it may be silenced with a **User Code** or by optional Radio Keys, otherwise it will reset at the end of Alarm Reset Time.

All alarms are stored in memory and may be viewed at any time by entering **Memory Mode**.

KEYPAD
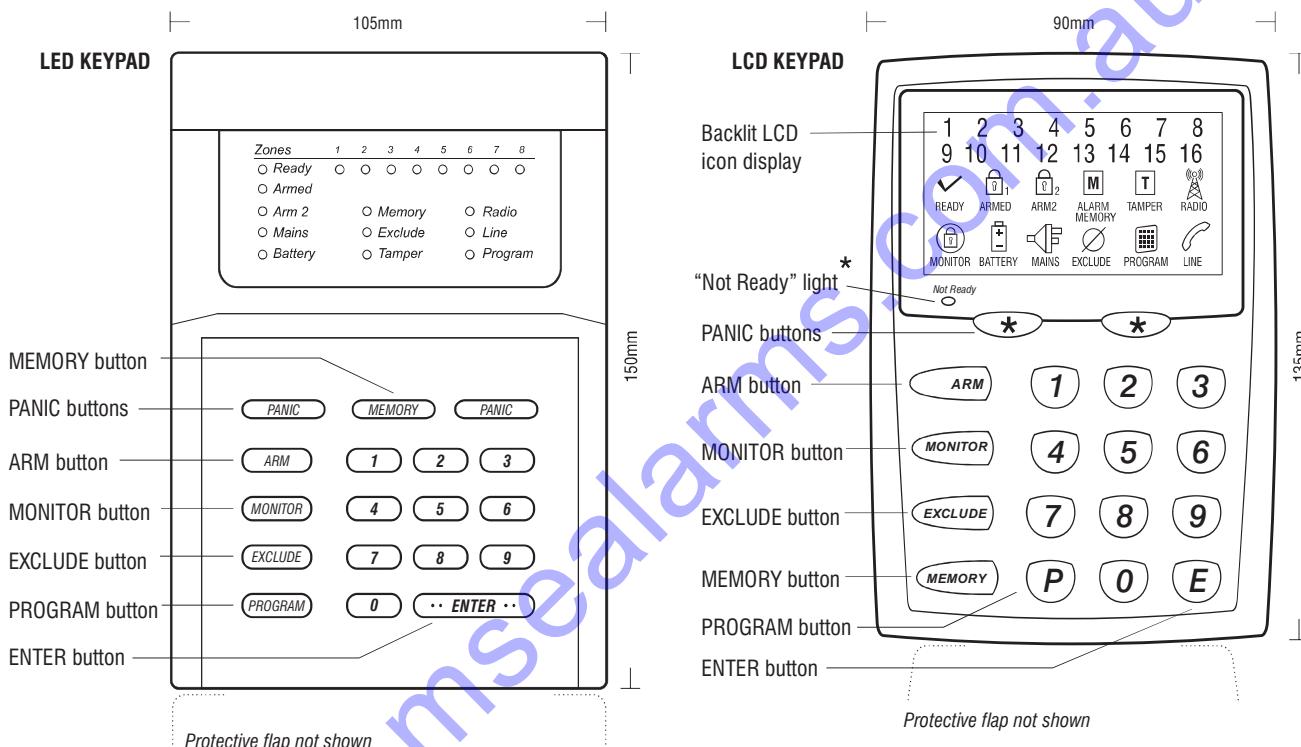

The D8 control panel may be supplied with either the LED keypad (100-192) or the Ness LCD Keypad (100-667).

The keypad provides important visual and audible indications and is the main interface for operating and programming the D8 control panel.

DISPLAY TEST (LCD Keypad only)

To display all the keypad icons press and hold the E button for at least 2 seconds. All the icons will be on whilst the E button is held down.

Display Test can be activated at any time either in operating mode or any program mode.

www.msealarms.com.au

OPERATION

This section describes the operation of a typical control panel installation. Keep in mind that your installation may vary depending on the selected options and equipment. The operating instructions which follow will cover the most common options.

Consult your installation company if you require further information.

All control panel operations are controlled by the D8 LED or LCD keypad except if an optional key switch or radio control equipment is installed.

OPERATING RULES

Generally, the panel will be Disarmed. Armed or Monitor modes provide different levels of security for your premises when you are home or away. Three other temporary modes; Program, Memory and Exclude, allow you to perform various operations. The panel will automatically exit from these temporary modes if you do not press any buttons on the keypad in a 4 minute period.

If you make a mistake while entering any codes, press the Enter or E button and start again.

When you are required to enter your access code, you are given five opportunities to enter it correctly. After the fifth invalid attempt the alarm is activated (requiring the correct code to silence the alarm). This prevents anyone trying to guess your code by entering random numbers.

AREA OPERATION

Area Partitioning allows the 8 zones to be split into two partitions; Area1 and Area2.

The panel then effectively operates as two separate systems sharing only the siren outputs and dialler.

USER CODE ASSIGNMENT

A User Code assigned to an Area can Arm and Disarm only that Area. User Codes assigned to both Areas will operate both Areas simultaneously.

COMMON AREA ZONES

Zones assigned to both Areas are Armed only when Area1 and Area2 are both Armed. This allows the Common Area zone/s to be shared by both Areas.

For example, Office A and Office B operate as separate areas but the entrance foyer used by both offices is assigned to both areas meaning it will automatically Arm when both Areas have Armed. The Common Area then automatically disarms when either Area1 or Area2 Disarms.

OPERATION

Arming and Disarming is carried out as normal from a single keypad or separate keypads installed in both areas or by Radio Key.

Area operation only applies to zones when they are in the Armed state. This means that Day, 24hr and Monitor zones are independent of the area operations.

Note: Area partitioning is in addition to Monitor Mode. Any zone may be allocated to any area.

ARMING	
🖵 **LED KEYPAD**	🖵 **LCD KEYPAD**
❶ The *Ready* light should be on.	❶ The *Not Ready* light should be off.
❷ Press... (ARM) (·· ENTER ··) ♪♪♪	❷ Press... (ARM)(E) ♪♪♪
or... (ARM) [User Code] (·· ENTER ··) ♪♪♪	or... (ARM) [User Code] (E) ♪♪♪
❸ The ● *Armed* light will turn on. • *Leave the premises within the Exit Delay Time.* • *3 beeps will sound at the end of Exit Delay Time.*	❸ The 🔒₁ ARMED icon will turn on. • *Leave the premises within the Exit Delay Time.* • *3 beeps will sound at the end of Exit Delay Time.*

The control panel must be Armed prior to vacating the premises in order to detect intruders. The panel must be disarmed and not in Program, Monitor, Memory or Exclude modes.

Note: If the panel is already in alarm, you must first silence the alarm before you can Arm.

If something is wrong when Arming the control panel, the normal 3 beeps will be replaced by other warnings.

♪ ⎍⎍10⎍ 10 beeps means Mains Power is turned off or the Backup Battery is low.

♪ ⎍‾‾�](L) One long beep indicates an invalid entry or an alarm is outstanding and needs to be reset by entering your User Code first.

SIREN WARNING:

At the end of the exit time, all zones should be **Sealed**. If any are **Unsealed**, the siren will sound for 2 seconds as a warning to indicate that those zones have been automatically excluded. For maximum security, you should return, Disarm, check the premises and then Arm again. Continual warnings could mean that a detector is faulty and may have to be manually excluded.

If the auto-exclude option is disabled, the siren will sound for the duration of reset time if a zone is Unsealed at the end of exit time.

NOTE: ARM ONLY codes
Normal user codes can arm the panel only if it is fully disarmed first.

User codes that are programmed to be **Arm Only** codes can arm the panel from Monitor mode or from the disarmed state.

See page 23 for User Code Programming.

OPERATION

DISARMING	
🖥 **LED KEYPAD**	🖥 **LCD KEYPAD**
❶ Enter the premises through a delay zone	❶ Enter the premises through a delay zone
❷ Press... [User Code] (·· *ENTER* ··) ♪♪♪	❷ Press... [User Code] (E) ♪♪♪
❸ The ● *Armed* light will turn off	❸ The 🔒₁ ARMED icon will turn off

When you enter the protected premises through a delay zone, the keypad responds with regular beeps* as a reminder to Disarm. You then have your programmed entry delay time to Disarm the panel by entering one of your user codes. If the panel is not Disarmed by the end of the entry delay time, an alarm will occur.

By using the optional radio keys you may Disarm your system from within your premises or from outside your entrance door. There is also the option to 'Chirp' the outside siren three times and to flash the strobe light for two seconds as an indication that you have Disarmed your system.

If you make a mistake in entering your code, then you must press enter and start again. Five incorrect entries will cause an alarm.

Note that user codes can optionally be programmed to be *Arm Only* codes. By definition, an *Arm Only* code can Arm the system but it cannot Disarm. (See page 23 for User Codes programming).

* If Entry Beeps are programmed on.

RESETTING ALARMS

Your panel can be reset and the alarm silenced by the same key sequence as Disarming the panel.

If you arrive at your premises and find the strobe light flashing* (if installed), reset the panel as above. To check the cause of the alarm, you can view the alarms in memory by entering Memory Mode.

* In the event of an alarm, the strobe light continues to flash until the panel is reset by the keypad or radio key, otherwise it will time out after 72 hours.

ALARMS, DEFINITION

Alarms may be caused by:

• A zone has been triggered while Armed
• A Tamper has been triggered
• A PANIC button has been triggered

All of these may cause your sirens and strobe to operate. Various visual indications relevant to the alarm will be retained in the memory. If this occurs, Disarming your control panel will reset the alarm. The cause of the alarm can be identified by entering the Alarm Memory Mode as described on page 15.

www.msealarms.com.au

MONITOR MODE

⌨ LED KEYPAD	⌨ LCD KEYPAD
❶ Press... (MONITOR) (·· ENTER ··) ♪♪♪	❶ Press... (MONITOR) (E) ♪♪♪
or... (MONITOR) [User Code] (·· ENTER ··) ♪♪♪	or... (MONITOR) [User Code] (E) ♪♪♪
❷ The ● **Armed** light will flash continuously • *Only the zones which have been programmed by your installer as Monitor zones will be Armed*	❷ The (🔒) **MONITOR** icon will turn on • *Only the zones which have been programmed by your installer as Monitor zones will be Armed*

Monitor mode allows you to Arm selected zones while others are ignored. Typically, perimeter zones (doors and windows) can be monitored while you are at home.

Your installer must program which zones will be active in Monitor mode.

The panel must be fully Disarmed before Arming in Monitor Mode.

If an alarm occurs while in Monitor mode, entering **[User Code]** (E) will silence the alarm. This will also Disarm the panel, so remember to enter monitor again if needed.

Using the optional Radio Keys you can enter Monitor Mode by pressing the OFF button twice within 4 seconds or by pressing the ON button twice within 5 seconds. (Your installer must enable Radio Key Monitor Arming for this to work).

TEMPORARY DAY ZONES

The Ness D8 now includes the 'Temporary Day Zone' feature which allows easy and flexible Day Zone selection and operation.

Temporary Day Zones operate in addition to Permanent Day Zones which are usually setup by the installer.

While remaining in normal operating mode, the user can add and remove 'Temporary Day Zones'.

As an extra feature, the user can easily enable or disable Day Mode, (which includes both Temporary and Permanent Day Zones).

Day Zones can be programmed by your installer to beep the keypad, or briefly sound the siren/s or flash the strobe light, or to sound an optional buzzer. (Although the keypad beeper provides sufficient warning in most situations).

TYPICAL APPLICATIONS
Day Zones are useful for a variety of applications such as a shop door beeper, triggered by a reed switch on the door.

For example, the shopkeeper can use **0**+**E** to enable Day Mode when he is working out the back.

For extra security he can use the **P**+**E** command to add additional Temporary Day Zones such as the rear door or the fridge doors.

COMMANDS
(Accessed from normal operating mode).

ENTER SELECTION MODE.
$\boxed{P}$ + $\boxed{E}$

Press **P** followed by **E** when in operating mode to enter Temporary Day Zone selection mode.

ZONE SELECTION.
[Zone No.]+ $\boxed{E}$

To select or deselect zones to be Temporary Day Zones. The selected zones are indicated by the corresponding zone number.

Permanent Day Zones, (installer option P53E), are not displayed in selection mode. Permanent Day Zones can be selected as Temporary Day Zones but this has no effect as those zones are already day zones.

EXIT SELECTION MODE.
$\boxed{E}$

Saves changes and returns to normal operating mode.

ENABLE DAY MODE.
$\boxed{0}$ + $\boxed{E}$

This enables/disables both Temporary and Permanent Day Zones.

When Day Mode is enabled, any unsealed day zone will sound the programmed output for 2 seconds. When Day Mode is disabled, an unsealed day zone will simply be indicated on the keypad as an unsealed zone.

(Note: The keypad does not indicate if Day Mode is enabled or disabled).

EXAMPLE

An example of how to select zones 1, 2 & 3 as Temporary Day Zones.

Note that Permanent Day Zones which have been programmed by the installer cannot be deselected by this method. However, the user can disable Day Mode using the **0+E** command.

TO ENTER SELECTION MODE

ARMING MONITOR MODE *(If enabled by your installer).*

Press the OFF button twice within 4 seconds
...or... press the ON button twice within 5 seconds.

- *The keypad will give 9 beeps.*
- *The outside siren will NOT 'chirp'.*
- *The strobe light will flash briefly.*

PANIC

Press and hold the PANIC button for at least 4 seconds.

- *The siren and strobe will activate, (If enabled by your installer).*
- *The dialler will report a Panic alarm, (If enabled by your installer and if your system is monitored by a central station).*

Press the OFF button to reset a Panic alarm.
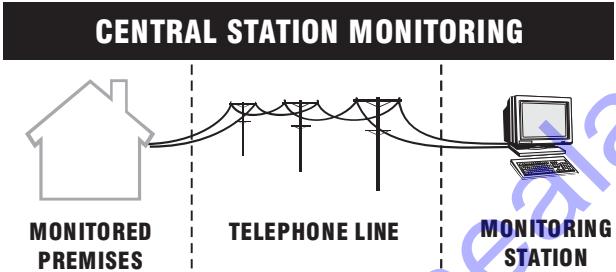

Note: Ness Radio Keys are optional and are not supplied with any Ness control panel as standard.
Ness radio products require a Ness Radio Interface (100-200) to be fitted to the control panel.

www.msealarms.com.au

CENTRAL STATION MONITORING

The D8 control panel has an on-board digital dialler which can send detailed alarm messages to a Central Monitoring Station.

The digital messages can include information about the zone or zones which caused the alarm, tamper alarms, low battery or mains failure reports, and it can also (by user number) identify the users who Arm and Disarm the system.

Central Station Monitoring is highly recommended and is the most effective method of monitoring your D8 alarm system. For further information about 24 hour monitoring, contact your installer or Ness Security Products.

CENTRAL STATION MONITORING

MONITORED PREMISES — TELEPHONE LINE — MONITORING STATION

* The Primary and Secondary telephone numbers are normally only used for central station monitoring. These numbers can only be programmed in Installer Program Mode.

** The Follow Me Telephone Number replaces the Primary AND Secondary telephone numbers.

AUDIBLE MONITORING

The D8 can also be programmed to send audible messages to any telephone or mobile phone.

When programmed for audible monitoring, the D8 calls a pre-programmed number (or numbers) and sounds a series of beeps over the phone. These beeps can identify the zone or zones which caused the alarm and well as several other alarm types.

FOLLOW ME TELEPHONE NUMBER

The Follow Me Telephone Number is the telephone number to which the D8 sends alarm reports when Audible Monitoring is enabled.

The Follow Me Telephone Number can be changed by the user in User program Mode.

If the Follow Me Telephone Number is programmed, the Primary and Secondary telephone numbers are ignored, even if programmed. (When Audible Monitoring is enabled).

See page 25 for information on programming the Follow Me Telephone Number.

AUDIBLE MONITORING SEQUENCE
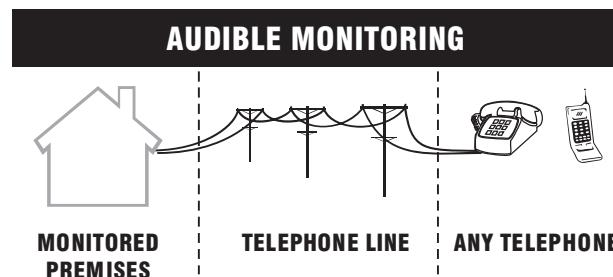

When triggered by an alarm, the D8 will dial the programmed telephone number/s and output the audible message for 45 seconds or until it is acknowledged.

ACKNOWLEDGING THE ALARM

The person receiving the call can then acknowledge the alarm by pressing the [#] key on their telephone. Press the [#] key for at least 2 seconds during pauses in the audible message.

(On mobile phones, press the [#] key in short bursts. Many mobile phones enter sub menus if the [#] key is pressed continuously).

If the alarm is not acknowledged, the keypad's LINE light will flash continuously until the panel is next Armed.

AUDIBLE MONITORING

MONITORED PREMISES — TELEPHONE LINE — ANY TELEPHONE

NOTES

www.msealarms.com.au

Various system options can be programmed by the user. These options can only be accessed from Program Mode.

User Codes may need to be re-programmed if a person has forgotten their code, to give a new user access to the system or to give someone temporary access.

User Codes 2-15 can be set as **Arm Only Codes**. These codes can Arm but cannot Disarm the panel. (Useful for assigning to cleaners, tradesmen etc.)

You may need to change the **Entry and Exit timers** if you find the delays are too long or short.
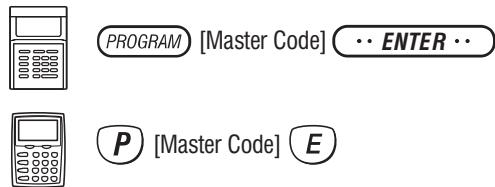

If Audible Monitoring is programmed by your installer, the **'Follow Me' Telephone Number** is the telephone number the dialler will call in the event of an alarm.

If your Ness D8 panel is monitored by a Central Station, the Follow Me number is ignored.
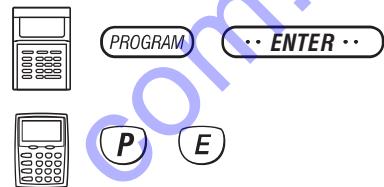

For all other programming changes, talk to your installer.

The panel will automatically exit Program Mode is no buttons are pressed within a 4 minute period.

PROGRAMMING **USER CODES**	
🖳 **LED KEYPAD**	🖳 **LCD KEYPAD**
❶ Press... (PROGRAM) [Master Code] (·· ENTER ··) ♩♩♩ *Enters Program Mode. The PROGRAM light will be on.*	❶ Press... (P) [Master Code] (E) ♩♩♩ *Enters Program Mode. The PROGRAM light will be on.*
❷ Press... (PROGRAM) [Option No.]* (·· ENTER ··) ♩♩♩ *The two digit option number for the code to be programmed. The existing code (if any) will be displayed.*	❷ Press... (P) [Option No.]* (E) ♩♩♩ *The two digit option number for the code to be programmed. The existing code (if any) will be displayed.*
❸ Press... [NEW CODE] (·· ENTER ··) ♩ [NEW CODE] (·· ENTER ··) ♩♩♩ *Enter the new code twice. The new code will be displayed.*	❸ Press... [NEW CODE] (E) ♩ [NEW CODE] (E) ♩♩♩ *Enter the new code twice. The new code will be displayed.*
❹ Press... (PROGRAM) (·· ENTER ··) ♩♩♩ *To exit Program Mode*	❹ Press... (P) (E) ♩♩♩ *To exit Program Mode*

DELETING **USER CODES**	
At Step 3, enter MEMORY E, instead of a new code.	
❸ Press... (MEMORY) (·· ENTER ··) ♩♩♩ *The existing code has now been erased.*	❸ Press... (MEMORY) (E) ♩♩♩ *The existing code has now been erased.*

EXAMPLES *The panel must be in program mode. (Program light ON).*

• **To program User Code 1 to be 1234:** P11E 1234 E 1234 E

• **To program User Code 2 to be 5678 and an ARM ONLY code :** P12E ARM E 5678 E 5678 E
  When an Arm Only code is displayed, the ARM light or icon is displayed before the digits of the code

• **To deselect the Arm Only feature** for a particular user code, simply enter the option for that code and press ARM E without re-entering a new code. This retains the existing code and toggles off the Arm Only feature.

• **To delete User Code 2:** P12E MEMORY E

USER CODE PROGRAMMING RULES:

• All codes can be 3, 4, 5 or 6 digits long.
• Codes beginning with 0 (zero) can be programmed but they *will not* operate the panel. This is an alternative method for disabling user codes, however the MEMORY E function is recommended for deleting user codes.
• Codes are rejected if already used. Some codes that are similar to existing codes may also be rejected.
• The Master Code, (User Code 1), cannot be an ARM ONLY code.
• The Master Code must always be programmed, all other codes are optional.

* For a list of programming option numbers, see the Programming Options Table on page 22.

REMOTE OPERATION

OPERATING THE D8 BY TELEPHONE

The D8 will allow a user to call in to the panel, using a standard DTMF telephone, and remotely Arm or Disarm all areas and also turn on or off Aux 1 and Aux 2.

To ensure security of operation a user can only carry out remote operations after entering a valid user code.

WHAT'S NEEDED:

- A telephone with DTMF tones.
- A Valid User code programmed in the D8.
- The D8 to be connected (via Mode 3 socket) to a working telephone line at the installed premises.
- You need to know the telephone number of the line that the D8 is connected to.

SEQUENCE OF OPERATION.

1. Phone the D8 telephone number and listen for the required number of rings (ring ring...ring ring) and then hang up.

2. Wait 10 seconds and then call the number again within 50 seconds.

3. The D8 will answer the second call immediately, sound a beep for 2 seconds then, after a pause, it will sound a lower frequency tone. The D8 is now ready to receive telephone commands.

4. Press the [0] button on the telephone. This tells the D8 that telephone commands will follow. It will respond with either 3 beeps if all OK (One long beep means try again).

5. Now enter a valid User Code (that is normally used for Arming or Disarming the D8) followed by the [#] button.

   The D8 will respond with 3 beeps if it recognises the code or 1 long beep to signal the code was invalid and to try again.

6. Enter the required command.
   See: Summary Of Telephone Commands.

7. Press [*] [#] to finish. This tells the D8 to hang up. Also, hang up your telephone.

EXAMPLE: ARMING THE D8 BY TELEPHONE

1. Dial the D8 telephone number. Listen for one double ring then hang up.

2. Wait 10 seconds, then dial the D8 telephone number again.
   The D8 will answer immediately and gives a 2 second beep followed by low tone.

3. PRESS [0] To prepare the D8 (♪♪♪ 3 beeps)

4. PRESS **[User Code]** [#] to authorise the next command (♪♪♪ 3 beeps)

5. PRESS [1] [#] to Arm the panel (♪♪♪ 3 beeps)

6. PRESS [*] [#] to finish and hang up

AUDIBLE FEEDBACK

♩♩♩ **3 BEEPS:**
• The User Code is valid
• Successful Arming or Disarming
• An Auxiliary output has been turned ON.

♩⎍ **1 LONG BEEP:**
• D8 is already Armed
• Invalid code. Try again.

♩ **1 SHORT BEEP:**
• An Auxiliary output has been turned OFF.

SUMMARY OF TELEPHONE COMMANDS

[0]		Prepare to receive commands
[1]	[#]	Arm Areas
[2]	[#]	Disarm Areas
[3]	[#]	Turn Aux 1 Output ON or OFF
[4]	[#]	Turn Aux 2 Output ON or OFF
[*]	[#]	Finished – hang up
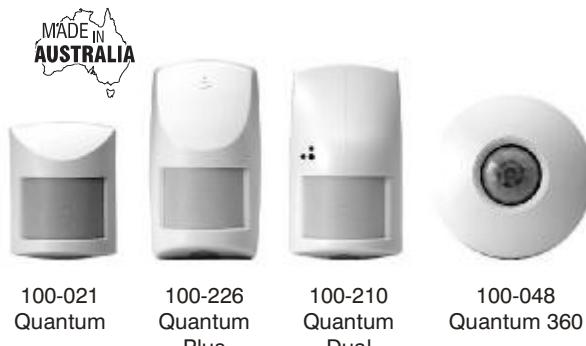

NOTES

• If the D8 does not receive commands for periods longer than 10 seconds it will assume that the call is finished and it will hang up.

• If an alarm occurs which requires the D8 to dial out while attempting remote control, the D8 will treat the alarm as a priority, give a constant tone as a warning and then hang up.

• When all remote control commands are finished press [*] [#] to force the D8 to hang up.

NESS ACCESSORIES

100-021	100-226	100-210	100-048
Quantum	Quantum Plus	Quantum Dual	Quantum 360

MOTION DETECTORS

Ness manufactures a range of high quality and efficient motion detectors - including passive infra-red detectors, dual technology / microwave and infra-red devices as well as ceiling mounted 360° detectors.

All Ness detectors are designed using the most modern technology and techniques that ensure superior reliability and performance.

QUANTUM - 15m passive infra-red detector with selectable pulse count; suitable for domestic and commercial installations. *PetAware model available.*

QUANTUM PLUS - 15m passive infra-red detector with selectable pulse count, temperature compensation and downward looking 'creep' zones.

QUANTUM DUAL - 15m combination microwave and passive infra-red detector. This combination of detection technologies virtually eliminates the possibility of unwanted alarms but faithfully detects humans. *PetAware model available.*

QUANTUM 360 - Ceiling mounted 360° passive infra-red detector with selectable pulse count and sensitivity. Provides 8 metre coverage mounted at standard 2.4 metre ceiling height.

NESS PET AWARE DETECTORS

The Ness Quantum™ Pet Aware PIR, Pet Aware Radio PIR and the Pet Aware DUAL are able to discriminate between household pets and unwanted human intruders, allowing you to secure your home with your pets indoors.

SIRENS

The range of warning devices includes horn speakers, polytough siren covers, internal 'screamers' and satellite sirens with their own battery backup.

CCTV

The Ness range of Closed Circuit TV equipment includes Dome cameras, B/W or Colour cameras, Miniature hidden cameras, Monitors - even digital video recorders and remote telephone video systems.

SWITCHES

A variety of switches are available for protecting doors and windows. The line-up includes surface and flush mount reed switches, emergency buttons, roller door reed switches and the unique Nessensor™ vibration sensor for highly effective perimeter protection.

www.msealarms.com.au

MADE IN AUSTRALIA

OPTIONAL RADIO ACCESSORIES

Ask your installer about the range of Ness radio devices for the optional extra convenience of wireless remote control and wireless detection.

Operating your Ness security system can be as convenient as opening your car door. The Ness Radio Key™ provides the benefits of separate ON, OFF and PANIC buttons in a slim, waterproof remote control.

* Ness radio products require a Ness Radio Interface (100-200) to be fitted to the control panel.

RK4
100-067

RK3
100-664

NESS RADIO KEYS

Fully waterproof, ultra slim 3 or 4 button Radio Keys for remote control of the control panel.

With separate buttons for ON (Arm), OFF (Disarm), PANIC and AUX functions (RK4 only). Including long life lithium battery.

NESS RADIO KEY PENDANT

Fully waterproof pendant style transmitter can be used as a portable wireless Panic button.

Supplied with a neckchain as well as wristwatch straps. Ideal for use as a medical alarm for the elderly or infirm. (Central Station Monitoring is especially recommended when used for medical alarm purposes). Includes long life lithium battery.

NESS RADIO REED SWITCH

Ness Radio Reed Switch for wireless door and window protection. Includes long life lithium battery.

NESS RADIO KEYPAD

A unique fully portable radio keypad. The Ness Radio Keypad provides totally wireless Arming/Disarming of the Ness D8, D16 & D24 control panels.

Also operates Monitor mode and Panic when used with the Ness D16, D24 panels.

The Ness radio Keypad is suitable for use as a portable keypad or for adding an extra keypad in areas where it is not possible to install wires.

QUANTUM PET AWARE

Ness R12 Radio PIR

Ness R15 Radio PIR

NESS RADIO MOTION DETECTORS

Ness R15 Radio PIR and Ness R12 Radio PIR for wireless motion detection.

Can be used in combination with Ness hardwired detectors in areas where it is not possible to install wires. Includes long life lithium battery.

The Ness R15PET Pet Aware model detects humans but is immune to household pets. Allows you to protect your home with your pets inside.

NESS RADIO SMOKE DETECTOR

Radio Smoke Detector using Ionisation smoke detection technology. With on board sounder. A single battery powers the smoke detector and the transmitter. Includes 9V lithium battery.

TROUBLESHOOTING

SYMPTOM	POSSIBLE CAUSE	REMEDY
Zone light on or long beeps when Arming	One or more Zone Detection Devices (e.g., PIR, Reed Switch) may be Unsealed	Close door or window, find the cause of movement
10 beeps from keypad MAINS light flashing BATTERY light flashing	The mains power may be off, ...or the panel's backup battery may be low, ...or a Radio Device battery may be low.	Make sure the plug pack is plugged in and the power point is turned on. Call your installer.
1 long beep from keypad	Invalid keypad entry	Press E button and try again
2 second siren at the end of Exit Delay time	A zone was Unsealed at the end of Exit Delay time	Disarm the panel and check all zones
Strobe light is flashing	There has been an alarm	Reset the alarm by Disarming the panel and check the Alarm Memory
Siren sounds while the panel is Disarmed	A 24 hour zone has been triggered. E.g, Siren Tamper, Box Tamper, Panic Button.	Reset the alarm by Disarming the panel and call your installer.
EXCLUDE light is flashing	A zone/s has been Excluded	
TAMPER light flashing	The 24 hour Tamper input has triggered	Call your installer
ALARM MEMORY light is flashing	There are alarms in memory	To clear the ALARM MEMORY light, view the Alarm memory otherwise the light will clear next time you Arm the panel.
Cannot enter Program Mode	The panel is Armed. Only the Master Code can enter Program Mode.	Disarm the panel before attempting to enter Program Mode. Try again using the Master Code.
